

WIND TUNNEL

Prepared by: Ng Kah Kit

ABSTRACT

The title of y project is designing a model wind tunnel. Wind tunnel is widely use is recent years to determine the aerodynamics of an object that we are going to test in it. The content of this project report is mainly about how to construct to introduce and to learn about wind tunnel. I will display some formula and calculation about how to calculate the air velocity and discharge of the air. I will also give clearer picture to indicate how is the wind tunnel works. Please give some time to read through this project report and you will know more about wind tunnel and aerodynamics.
