

THE DESIGN AND MANUFACTURER OF OVERHEAD CRANE

Prepared by: David Khoo Lek Wei

ABSTRACT

The main purpose of this project is to construct an overhead crane which can be controlled manually by switch. The field of the overhead crane emerged as one of the important machine specialization for the 1970s and 1999s. Engineers, technicians, and scientist must be educated and trained in order to realize the full potential of this technology in manufacturing. It is my hope that this project report might served as a good reference for every engineering student about the development of an overhead crane.
