

THE DEVELOPMENT OF GLIDE FOLD-UP SCOOTER (VTOOR)

Prepared by: Wong Gin Wei

ABSTRACT

In this millennium year, glide fold-up scooters are popular everywhere in the world especially for a short distance transport. However, most of the scooters have the same features such as foldable, telescopic head tube and rear brakes.

The goal of this project is to develop a glide fold-up scooter for convenient use in travelling within a short distance. The design of the scooter is suitable among children, teens and adults. The project highlights the advantages of using the scooter as a means of sports as well as transport purposes. A structure design of the scooter was sketched out.
