

A WATER SURFACE DIRECTIONAL SYSTEM FOR SNORKELING

Prepared by: Ng Kia Kiah

ABSTRACT

The main purpose of this project report is to provide overall basic and main information of my project is 'A Water Surface Directional System For Snorkeling'

This project starts with all the list of illustration of impeller; span and the most important component submerge water pump.

After reading report, the reader will have a better understanding about the usage of this machine. As a machine designer, other designer can serve this project as references or guidelines in further modification for the machine it is because this machine is only a prototype.
