

MOULD DESIGN OF A CYLINDER HEAD

Prepared by: Tay Wen Chang

ABSTRACT

This project consists of information that is essential for an engineering student to learn and also some useful knowledge and principles that can be apply in real life despite of their fields of study. The contents mainly consist of the concept of manufacturing design and also some other considerations of design before any product can be seen in the market.

In this report, I will explain to you about what are a cylinder head, how it is manufactured and most importantly how the mould for this product is design. Through the whole report you will definitely gain some knowledge about the manufacturing process of the product as far as an engineering point of view is concern
