**DIFFERENTIAL TEMPERATURE INDICATOR**

Prepared by: Law Yee Wen

# ABSTRACT

This project report is all about my project call 'Differential Temperature Indicator'. This report wills fully analysis my project. What thing I have don't and how is going to work.

All the details information will be report in here, it will show you what is my concept, and it had include project construction, hardware construction and software construction. In the project constructions is basically tell you how to build a PCB board. In the hardware construction I will briefly tell you my concept for building the circuit and how I am going to connect the parallel port to my temperature circuit. At last the software construction it will show you how I am going to write the program that can control the two temperature sensor and how I going to read and write to the temperature sensor. Besides that I had also include simple software inside this report. That you can use as a reference.
