

# RECYCLE PAPER MACHINE

Prepared by: Woh Yoke Hon

## ABSTRACT

---

My project is to design and construct a recycle paper machine seem that timber is the major raw material of making paper. Recycle paper is made by unwanted paper material. By this way we are able to reduce the usage of timber and at the same time reduce the quantity of rubbish. The machine that I design is in the size of compact. It is designed for home use purposes.

The machine consists of three major processes. Stirring, rolling, and heating. The major products which can be created by the machine are gift warping paper and toiler paper.
