

AIR DUCT CALCULATION SYSTEM

Prepared by: Lee Chee Whay

ABSTRACT

The purpose of this project is to provide an understanding in the design and analysis of the central air-conditioned system. This project is done with an objective to help ease the work of the designer in calculation part of the system.

In this report, detailed description and explanation are available in order to understand the design of central air-condition system, the formulas are given and illustrate with detailed explanation and numerical example. Furthermore, the coding of the programming and the layout with interface are available in this report.
