

CAR WASH DEVICE

Prepared by: Yap Kok Chun

ABSTRACT

The final project is a design, which consists of the brainstorming of a project student. This is an individual project and the students should create their own ideas on this project. My project title is Car Wash Device, which is related to the fabrication of a device to moderate those tiresome works. Nowadays, people are sending their cars for washing, it is a time waste and of course their money.

The objective of this project is to design and fabricate a device to replace a hand motion washing operation. It can save our precious time and get the task done more effectively and faster. The device is driven by the water jet and a container will combine together intend to perform a 2in 1 washing operation.
