

DESIGN OF LIFTING CONTRAPTION USING PEAUCELLIER MECHANISM

Prepared by: Han Kok Deng

ABSTRACT

Linkages play important roles in our daily life, such as provide desired motion and output force. Till today, only one linkage has been found to trace an exact straight-line motion. It is the Peaucellier mechanism. This project main objective is to create a tool that makes design of 'lifting contraption by suing Peaucellier mechanism' become easier.
