

DESIGN OF AN AUTOMATIC POSTAL SYSTEM

Prepared by: Chai Swee Lai, Johnny Ho Cheep Oh, Kumaran Sagadavan, Lim Chian

ABSTRACT

This report basically consists of information on the current existing of Manual Postal System in Malaysia compared to our idea of the Automatic postal machine. This project title is meaning that we try to implement the brand new technique which involves less cost and labor in dealing with the post.

Let us go through the current technology development around us, all are becoming automatic and some more involve robotic and Computer Numerical control, the society is stepping fast to next generation where maybe a century later man will be replaced all by automatic system.

This system tries to speed up the processing, queue time and reduce cost. The main purpose of this system is to let it work for 24 hours to some user where they no need to go to the post office during the working hour. Furthermore, when there is a peak time where peoples want to pay their bills like electrical and water bill, there will be a long waiting time.
