

ROBOT FOR HIGH RISK JOB

Prepared by: Thamer H. I Al-Hatani, Lee Sid Hwa, Choy Kim Choon, Hoh Wei Yip

ABSTRACT

This project is entitled 'Robot For High Risk Job', contains all the results of our group's 4 months research and design work regarding the subject matter.

Within this project report, the reader will be encouraged to concentrate to main concepts regarding our robot design background and also the robot functions and mechanism, so that they may be able to get brief understanding about our project title.

The more technical and knowledge readers in engineering can refer to our robot design plan and also the electrical and electronic part for the circuit, the reason why this circuit is use and etc.

This project report needs the co-operation within civil, mechanical and also electrical and electronic engineering to make this project success. Especially the robot mechanism and circuit is one of the most interesting part that we have put a lot of effort inside. We really hope this project can provide some knowledge and reference to those who are interested.
