

ROBOT T-REX

Prepared by: Chua Si Lip, Teh Hoi Gek, Chin Swee Koon

ABSTRACT

This project is called Robot T-Rex. This report summarized all about the particular project that have been done which intend to have a brief understating for knowledge and we had completing the process of this project, this were being prepared.

This project report is about the process, problem and the solution, construction, troubleshooting, engineering analysis of project and useful details. Reference sites and magazine books are attached to the report to appreciate the authors and research. The reader can also refer to these books and sites in the Internet to know better about electronic and electrical devices. Appendix is also inserted into the report to provide the characteristics of the components. Photographs of the construction and result of the circuit is also taken and attached in the report to help reader understanding it. Along the completion of this project, we have been through problems that cannot be solved and results have come out to our mind with discussion and meeting.

We also had found the potential of the project that is constructed has great potential of market value. With this report were able to introduce to people how our system works with its construction by shoeing them the structure of the devices. The report that is prepared by the group is a proposal that can be used to introduce the product to the market and allows everyone to understand the concept of this project. Nevertheless, this report is full of information of the project that will gain more of your interest of this project that is accomplished.
