

The Roles of Response Plan in Construction Risks Management

Prepared by: Wong Viang Juan

ABSTRACT

Construction industry is one of the most unsafe businesses that will face a lot of unpredictable risk and predictable risk. In distinguishment of the criticalness of risk response plan in guaranteeing the accomplishment of the task, the points of this exploration is to correctly distinguish the act of risk management among the construction experts particularly the among surveyor. Their level of awareness and current rehearse on risk response plan will be distinguished through this examination. There are 2 methods to collect data for this thesis. First method is collected from books, journals, articles, internet website and others. Second method is collected from questionnaires that will distribute to quantity surveyor, contractor, and project manager. The study result showed an exceptionally positive input from the respondents. A large portion of them are mindful and have a great information on risk response plan, yet when it go to the act of risk response plan in their everyday work, just a small scale of them are not practicing risk response plan. It can be presumed that risk response plan still has to approach to go so as to be completely acknowledged and perceived in Malaysian development industry.
