

# **A Study on Potential Implementation of Rainwater Harvesting System (RWHS) at INTI IU, Nilai**

Prepared by: Chua Bee Jean

## **ABSTRACT**

---

Rainwater harvesting systems (RWHS) are becoming increasingly popular due to its many benefits. It can be a simple system created by users themselves or professionally installed by specialized companies. It has even become mandatory to be installed in newly built homes in certain states of Malaysia.

This project aims to determine the feasibility of implementing a rainwater harvesting system in the academic block of INTI International University (IIU), Nilai. The method of determining this subject will be discussed in the paper.
