

Design an Ideal House for Housing Area Located Beside a University

Prepared by: Tan Jun Yong

ABSTRACT

The title of this project is to design an ideal house for housing area located beside a university. The main objective of the project is to design a house that is safe, durable, economical and attractive.

The house is located beside Inti International University in Nilai, Negeri Sembilan. The architectural drawing is completed by using the autocad to illustrate how the house looks like. The structural drawing is also being produced for ease the calculation.

The concept of ideal house is stated in the report. The method of designing a house is shown.
