

Design Of Portable Auto-Adjustable Laptop Desk

Prepared by: Chua Cheng Jie

ABSTRACT

This report is introduced of the project on how it improving the living style, the design is modifying the leg of the laptop desk. The design is comfortable and convenience to the users. It can adjust the height by the different anthropometric data of users. It can increase the height and decrease the height by adjusting the leg. In the report will explain what materials using and how the motor works. The portable laptop desk will operates by manually and motors.

In the project will involve some bas electric circuit, electrical components, such as batteries use to generate the dc motor to lift the leg. Further details and information are provided in this report. An assemble of the project for future is also include here, that it may have better performance and outcome.
