

Small, Low Cost Air Conditioner

Prepared by: Pang Jun Hau

ABSTRACT

The title for my project is Small, Low Cost Air Conditioner which can be used at a small room or in the living room. This project is mainly about the air conditioner which design in a small size and cheaper than a standing air conditioner in market.

This report introduces on how the air conditioner to cool up a small room or even better towards a person, so this design is convenient for a college student or a person which have a small room. A low salary people also can use this air conditioner. By using this air conditioner, it has two functions which are one is air conditioner and another one is as a water fridge. It also explained what material to use to construct an air conditioner. Of course, the report will also show the results of working efficiency. The air conditioner will operate as the plug is plugged to the electricity supply.
