

A STUDY INTO THE PROPOSED COSTING FOR GREEN DESIGN FEATURES TO INTI INTERNATIONAL UNIVERSITY LIBRARY IN PUTRA NILAI, NEGERI SEMBILAN

Prepared by: Low Keng Mun

ABSTRACT

The impacts of detrimental to the surrounding environment had result a growing awareness that there is need for more sustainable and responsible approach to the present practices. Besides, all people had to create a sustainable construction is depending on their knowledge and participate that involved in industry. In modern year, all people will be concerned more about their environment surroundings and the green design is rapidly gaining in popularity as well. Green design which means that using the environmental friendly products and design techniques, and it appeals to the conservation-minded as well as to whose desire to live in more healthful and more functional environment. The selection of materials is just of the part to making the green building. Building materials make up the environment in which human live, work and play. It is also becoming important to bring forward the human to a sustainable life. In conclusion, it is indispensable to improve the awareness of sustainable development and organization of education so as to create an approach for further generation action towards continuous performance improvement.
