

A STUDY INTO DESIGN, COSTING TO THE SOFT AND HARD LANDSCAPING WORK TO A PROJECT AT JOHOR

Prepared by: Gan Xin Yi

ABSTRACT

In this project, I have to study into landscaping and produce a suitable design for the site which located at Johor. The site area is 65m (length) x 47m (width). First of all, I need to know what is hard and soft landscape because in a landscaping design hard and soft landscape are the important items.

Soft landscape which includes trees and shrubs cannot be taken for granted, since the soft landscape is also an important feature and is necessary for every landscaping design to provide fresh air and enhance the beauty features for the landscape. Same goes to the hard landscape which formed a type of facilities and decoration for the area.

After understanding the landscaping works, I can start to produce a suitable design for the site. I also need to consider the facilities that set up in the landscape are suitable for the children, teenager and old people.

In addition, understand the rules and regulation for landscaping work is important before we carry out any landscape design. This is because it can help us to provide a better design and healthier facilities to the occupants in our landscape design. Other than that, I need to prepare costing and bills of quantities for the landscaping since prepare BQ is the primary job of Quantity Surveyors. So, I need to know the total construction cost for the landscaping work.
