

Frequent supply disruption unreasonable

Metro Mail

I AM a student of Inti College in Nilai, Negri Sembilan. I have been staying here for almost three years.

Nilai is quite a good place for studies; it is a small town and the cost of living is lower than KL.

But the problem is, there is frequently no water supply in Nilai. Last month, the water supply was disrupted twice and the second disruption lasted for five days.

The disruptions caused much inconvenience to everyone, especially hawkers and caterers. We could not bathe, we dared not eat out and we had to buy mineral water to drink, among many other problems.

Although there were lorries that brought water to us, the water looked like it was taken from a drain; it was yellowish and had a strange smell. How can we use it as our drinking water?

VCW,
Perai.
