

Technology leap

INTI College Subang Jaya has launched a "Hotspot" wireless LAN (Local Area Network) application at its campus concourse to enable staff and students to browse the Internet from anywhere in the concourse area.

This is said to be a "giant leap forward" as the Inti Group of Colleges aims to incorporate the e-campus concept to meet the demands of an increasingly IT-dependant society.

A plan for campus-wide wireless LAN infrastructure through a Broadband Internet Access with a minimum 384KBps to 2MBps bandwidth is scheduled in the near future.

"Through the introduction of this wireless application, we hope to boost the existing network infrastructure to bring a better highway of information and services in the most convenient manner available via the Internet for our students and staff," said Dr Saw Sor Heoh, principal of Inti College Subang Jaya.
